Stainless Steel Tepan Grill
Use & Care Manual
For Liquid Propane and Natural Gas Models

Liquid Propane Gas (LPG) Tepan Grill
Model TEPANLP
Natural Gas (NG) Tepan Grill
Model TEPANNG

FREE HELP

- Grill Operation
- Replacement of Damaged or Missing parts

Please call:
1-800-474-5587
Monday - Friday 8:00am-4:30pm PST

IMPORTANT:

- NOTE TO ASSEMBLER / INSTALLER:
  Leave this manual with the consumer.

- NOTE TO CONSUMER:
  Keep this manual for future reference.

- RECORD YOUR SERIAL #
Please read this manual carefully and before using your GRIDDLE to ensure proper operation, installation, servicing and to reduce the risk of fire, burn hazard and or other injury. This manual should be retained for your information.

NOTE:
Improper installation and service or maintenance may cause property damage, injury or death.

Do not operate this appliance without having read this manual.

All gas installations and gas conversions must be performed by a qualified technician or authorized service agent.

NOTE: This appliance is not intended for commercial use.

FOR YOUR SAFETY

If you smell gas:

1. Shut off gas to the appliance.
2. Extinguish any open flame.
3. If odor continues, immediately call your gas supplier or your fire department.

General Safety and Installation Warnings

Safe operation of the GRIDDLE depends upon its proper installation. Only a qualified professional installer and service technician must perform adjustments and service of the griddle. Proper location and proper use is essential to insure safe and continued trouble-free operation. Any non-approved alterations made to the appliance will void the product’s warranty.

NOTE: The manufacturer cannot be held responsible for damage or injury caused by improper use of this appliance. When your appliance, please read and follow these basic precautions:
To reduce the risk of fire, electric shock, or injury, read and follow these basic precautions before installing/operating your appliance.

**APPLIANCE INSTALLATION**

This gas appliance must be installed in accordance with all local codes. If installation is planned in an area with no local codes, the gas appliance must be installed in accord with the National Fuel Gas Code ANSI Z223.1 and storage and handling of liquefied petroleum gases, ANSI/NFPA 58 or CSA B149.1 natural gas and propane installation code.

**CALIFORNIA PROPOSITION 65 WARNING**

The burning of gas cooking fuel generates some by-products which are on the list of substances which are known by the State of California to cause cancer or reproductive harm. California law requires businesses to warn customers of potential exposure to such substances. To minimize exposure to these substances, always operate the unit according to the use and care manual, ensuring you provide good ventilation when cooking.

**WARNING**: Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Read the installation, operating and maintenance instructions thoroughly before installing or servicing this equipment.

**EXPLOSION HAZARD**

Do not use the appliance as storage area for flammable materials. Keep area clear and free from combustible materials, gasoline, and other flammable vapors and liquids. Failure to do so can result in death, explosion, or fire.

In Massachusetts: All gas products must be installed using a “Massachusetts” licensed plumber or gasfitter. A “T” handle type manual gas valve must be installed in the gas supply line to this appliance. This applies to permanently installed natural gas and propane installations. This does not apply to propane portable installations using a 20 pound tank.
Have an ABC Fire Extinguisher accessible at all times. Never attempt to extinguish a grease fire with water or other liquids.

**IMPORTANT:** Consult the AHJ (Authority Having Jurisdiction) or local contractor of any uncertainty.

⚠️ **WARNING**

This unit is for outdoor use only!
Do not operate in a building, garage or any other enclosed areas. This could result in carbon monoxide buildup which could result in injury or death.

⚠️ **WARNING**

For proper operation, burners must be aligned with the valve orifice and seated in the bracket slot. This is accomplished by first placing the burner tube shutter hole securely over the valve orifice and ensuring the male post on the griddle chassis rests in the opening in the rear of the burner. Failure to do so could result in a fire and injury.

**BEWARE OF SPIDERS**

**CAUTION: BURNER TUBES MUST BE INSPECTED AND CLEANED BEFORE EACH USE.**
Spiders and small insects occasionally spin webs or make nests in the burner tubes. These webs can lead to a gas flow obstruction, which could result in a fire in and around the burner tubes. This type of fire is known as “FLASH-BACK” and can cause serious damage to your appliance and create an unsafe operating condition for the user. Although an obstructed burner tube not the only cause “FLASH-BACK” it is the most common cause, and frequent inspection and cleaning of the burner tubes is necessary.

**FOR YOUR SAFETY**

1. Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.
2. Do not store any propane/butane (G31-G30) cylinder (that is not connected for use) in the vicinity of this or any other appliance.
Do not attempt to heat unopened containers on the griddle as pressure may build up and cause the container to explode.

Never use charcoal or any other solid fuel in the griddle.

Never cook without the drip pan in place.

Never operate this griddle while under the influence of alcohol or drugs.

**Location of Appliance**

Most importantly, this is an outdoor appliance. Ensure your appliance is positioned safely away from anything that can catch fire. *Under no circumstance is this appliance to be used indoors. This includes garages or any other enclosed area.* This outdoor cooking gas appliance is not approved to be installed in or on any recreational vehicles and/or boats. Griddles are for single family/residential use only.

When determining a suitable location take into account concerns such as exposure to wind, proximity to traffic paths and keeping any gas supply lines as short as possible.

- Do not store combustible materials, gasoline or flammable liquids or vapors around the appliance.
- This GRIDDLE must be located **outdoors only**. As with any gas appliance, harmful carbon monoxide is produced during the combustion process that should not be allowed to accumulate in a confined space. Please note since hot air rises above the GRIDDLE while in operation, it should have a clearance of 6 feet from the overhang.
- **DO NOT** obstruct the flow of combustion and ventilation air to this appliance
- Keep any electrical supply cords and the fuel supply hoses away from any heated surfaces and/or sharp and aggressive edges.
- **NON-COMBUSTIBLE ENCLOSURE:** The GRIDDLE must be installed in a **NON-COMBUSTIBLE ENCLOSURE ONLY**. The determination of whether a location is combustible or non-combustible construction is made by the local fire marshal, building inspector or the local safety authority having jurisdiction.
- **Clearance from Combustibles:** Ensure your appliance remains at a distance of at least 12” from sides & 12” from back from any adjacent combustible material such as wood, gyprock, paper and plants. The outdoor kitchen structure its of non-combustible materials.

---

NOTE: Check with City and Fire department for Local Building Codes. A Permit may be required for outdoor kitchen construction.

---
• **Adequate Ventilation:** Ensure there is adequate ventilation for both the appliance and island cavity. This is required not only for proper combustion, but also to prevent gas build up. While the amount of venting required varies on a case by case basis, consult with your local licensed professional and local code for adequate venting requirements. Keep the ventilation openings of the enclosure free and clear from any debris.

• **Firm Level Surface:** Use your appliance only on a firm level surface. This appliance is not designed for recreational vehicles, and should not be installed on a boat or marine craft.

• **Protection from Weather:** Keep the appliance protected from adverse weather, including rain and winds. Wind, particularly coming into the rear of the griddle, can affect the exhaust from escaping from the griddle. This can back up the heat behind the control panel potentially creating a gas leak, damage to the product, and injury.

• Allow clear access to the entire gas supply hose and regulator.

• **Maintenance Access:** When your appliance is installed, you should be able to access the gas supply line including the gas piping or hose, gas regulator, gas cylinder and any shut off valves.

• **Partial Enclosures:** Many backyards have areas that are partially closed off, such as balconies and pergolas. In some cases, it is hard to decide whether these partially enclosed areas should be classified as indoor areas, particularly in terms of permanent (non-closable) ventilation. Consult the AHJ (Authority Having Jurisdiction) or local contractor of any uncertainty.

---

**Please read all instructions before installing or operating your gas appliance to prevent injury and appliance damage.**

• All gas appliances will get hot during use. Use extreme caution when operating the appliance.

• Do not touch hot surfaces. Always use the handle to open or close the appliance.

• Close supervision is necessary when this or any appliance is used near children. Keep children away from the appliance during operation and until the appliance has cooled off.

• Do not store any LP cylinder or tank not connected for use with the appliance, in the area of this appliance or any other appliance. Never store an LP cylinder or tank indoors, or within the reach of children.

• Never test the appliance for gas leaks using a lighted match or any other open flame; see leak test procedures using soap/water solutions – see section on Leak Testing.

• The use of accessories, regulators, or components not recommended by the appliance manufacturer may cause injuries and will void warranty.

• Never light the appliance with the lid on and be certain that the burners are positioned and seated over the gas valves and on the burner support.

• Never lean over the cooking surface when lighting or operating the appliance.
- Use cooking utensils with wood handles and insulated oven mitts when operating the appliance.
- Do not store anything in the appliance. Make sure food is not forgotten in the appliance; forgotten items could melt or catch fire when the appliance is turned on.
- To prevent injuries, do not use accessories that are not recommended by the manufacturer.
- Never use the appliance in windy conditions. If located in a consistently windy area (oceanfront, mountaintop, etc.) a wind break will be required. Winds blowing into or across the rear exhaust can cause poor performance and/or cause the control panel to get dangerously hot.
- Always remove the appliance lid carefully, using only the handle - the lid may be hot.
- Children should not be left alone or unattended in an area where any appliance is in use. They should never be allowed to touch, sit or stand on any part of the appliance.
- Do not store items of interest to children in cabinets above the appliance or in the appliance. Children climbing on the appliance to reach these items could be seriously injured.
- Wear proper clothing when operating this appliance. Loose-fitting or hanging garments should never be worn while using the appliance.
- Do not leave the appliance unattended while in use.
- Do not use water on grease fires! A violent steam explosion may result. Instead, smother the fire with a multipurpose ABC extinguisher.

**Electrical Safety and Installation Warnings**

Extension cords may be used if:

- The marked electrical rating of the cord set or extension cord should be at least as great as the electrical rating of the appliance
- Care is exercised in their use
- The cord should be arranged so that it will not touch hot surfaces, sharp edges or drape over the countertop or tabletop (where it can be pulled or tripped over unintentionally).

Outdoor extension cords should be used with products suited for outdoor use. They are surface marked with suffix letters "W" or "W-A" and with a tag stating "Suitable for Use with Outdoor Appliances".

To protect against electrical shock, the power cord and plug should be kept dry and off of the ground.

Do not clean this product with water spray; do not spray cleaners into the lamp socket area.

Gasoline, lighter fluid or other flammable liquids and vapors should never be stored in the area of this appliance or any other appliance.

Before installation or service, disconnect the power supply to the work area by removing the fuse, "tripping" the circuit breaker, or unplugging the unit.

Keep any electrical supply cord and fuel supply hose away from any heated surfaces, sharp edges and
dripping grease.

Be certain your appliance is properly installed and grounded by a qualified technician in accordance with applicable codes. To guarantee the electrical safety of this appliance, continuity must exist between the appliance and an effective grounding system. It is imperative that this basic safety requirement be met. The manufacturer cannot be held responsible for damages caused by the lack or inadequacy of an effective grounding system.

Do not operate any appliance with a damaged power cord or power plug, and do not operate any appliance after the appliance malfunctions or has been damaged in any manner. If this should occur, return the appliance to the nearest authorized service facility for examination, repair or adjustment.

Be certain your appliance is properly installed and grounded by a qualified technician in accordance with applicable codes. To guarantee the electrical safety of the appliance, continuity must exist between the appliance and an effective grounding system. It is imperative that this basic safety requirement be met. The manufacturer cannot be held responsible for damages caused by the lack or inadequacy of an effective grounding system.

This appliance conforms to all uniform electrical safety codes and electrical grounding regulations. Install unit according to I.A.W. local codes or with National Electrical Code ANSI/NFPA 70 or CSA C22.1 in their absence.
the hose if necessary. Check for gas leaks before each use.

- Gas Specifications: Be sure that the gas supplied to the appliance conforms to the model you purchased. A Natural Gas appliance requires natural gas to operate; an LP appliance requires liquid propane gas to operate.

- Never connect the appliance to an unregulated gas supply line. Appliances operated without a regulator are unsafe and will not be serviced until installed properly and safely. Unsafe operation without a gas regulator will void the warranty of the appliance.

- Appliances operated with NG (natural gas) gas must be installed with the NG regulator supplied with the unit and set to 4.0" water column pressure.

- Appliances operated with LP (liquid propane) gas must be installed with an LP regulator set to 11" water column pressure.

- Please contact your dealer and use a licensed contractor or installer to convert your appliance to the different gas type.

- CHECK TO ENSURE THAT THE GAS SUPPLY HOSE DOES NOT COME IN CONTACT WITH ANY HOT SURFACE, SHARP OR ROUGH EDGES OF THE GRIDDLE OR OUTDOOR KITCHEN CONSTRUCTION. DO NOT KINK THE GAS LINE WHEN INSTALLING.

The self-contained LP system appliance is design certified to be used with a standard 20 lb., 12 1/4" diameter; 18" high cylinder with right handed connection threads and this is the maximum size LP tank to be used. The cylinder must be marked in accordance with the latest U.S. Department of Transportation specifications for LP gas cylinders. (DOT. CFR49 or National Standards of Canada CAN/CSA-B359 Cylinders, Spheres and Tubes for the Transportation of Dangerous Goods) a Propane Tank with an OPD) Overfill Prevention Device) must be used at all times.

**IMPORTANT: Never connect the appliance to an unregulated gas supply.**

The installation of this appliance must conform with local codes or in the absence of local codes, to the national fuel gas code, ANSI Z223.1a-1998. Installation in Canada must be in accordance with the standard CAN/CGA-B149.2, Propane Installation Code.

A licensed contractor or local gas company representative must perform all natural gas connections.

Ensure that the service supplying the appliance is fitted with a shut off valve conveniently positioned near the appliance and giving ease of access.

The appliance and its individual shutoff valve must be disconnected from the gas supply piping system during any pressure testing of that system.
GAS LEAK WARNINGS

§ Finding and/or fixing a gas leak is NOT a “DO-IT-YOURSELF” procedure – ONLY USE A PROFESSIONAL.
§ NEVER USE THE GRIDDLE WITHOUT FIRST LEAK TESTING THE GAS CONNECTIONS INCLUDING ALL
OF THE VALVES, FITTINGS, LINES ETC. (ANY GAS CONNECTION SHOULD BE CHECKED)
§ WARNING: DO NOT USE OPEN FLAME TO CHECK FOR LEAKS. USE OF AN OPEN FLAME
COULD RESULT IN A FIRE, EXPLOSION AND BODILY HARM.
§ DO NOT SMOKE WHILE PERFORMING THE LEAK TEST. Any Open Flame will Ignite the gas.
§ To prevent fire or explosion hazard, Perform leak test outdoors only.
§ Check to ensure that flexible hoses do not have any cuts and wear that may affect the safety before
each use. Only the factory supplied hose and regulator must be used. Use only replacement regulator
and hose assemblies specified by OUTDOOR PRODUCTS.

Checking for Gas Leaks

Perform a leak test before each use. In addition, whenever the gas cylinder is connected to the regulator or
whenever any part of the gas system is disconnected or replaced, perform a leak test.
As a safety precaution, remember to always leak test your appliance outdoors in a well-ventilated area.
Never smoke or permit sources of ignition in the area while doing a leak test. Do not use a flame, such as
a lighted match to test for leaks. Use a solution of soapy water.

- Prepare a leak testing solution of soapy water by mixing in a spray bottle one part liquid soap to one
  part water.
- Make sure all the control knobs are in the OFF position
- Turn on the gas
  - On Natural Gas systems, turn the main feed valve to the appliance.
  - On LP systems, turn the cylinder valve knob counter clockwise one turn to open.
- Apply the leak-testing solution by spraying it on joints of the gas delivery system. This includes all
  valves, pipe connections, joints, lines and every point from the gas source to the burners.
- Blowing bubbles in the soap solution and/or there is a faint gas smell (Typically Gas has an Egg
  Smell) indicates that a leak is present. Do not attempt to ignite the griddle.
- Turn all control knobs back to the full OFF position.
- Stop a leak by tightening the loose joint and/or resealing with thread sealant or Teflon tape, removing
sealant or tape in the event of a flared connection or by replacing the faulty part with a replacement part recommended by the manufacturer. Do not attempt to repair the cylinder valve if it is damaged. The cylinder must be discarded to a proper LP tank location and then replaced.

- If you are unable to stop a leak turn all control knobs back to the full OFF position, shut off the gas supply to the appliance and release pressure in the hose and manifold by pushing in and turning any of the control valves one quarter turn counter-clockwise.
- On LP systems, remove the cylinder from the appliance.
- Call an authorized gas appliance service technician or an LP gas dealer.
- Do not use the appliance until the leak is corrected.
- The below diagram is intended to show what a leaking connection would look like. These two locations are not the only points to check nor the only potential areas for a gas leak to be present.

**Leak Testing**

- All gas piping and connections must be tested for leaks after installation or service along with before each use. **This includes all valves, pipe connections, joints, lines and every point from the gas source to the burners.**

All leaks must be corrected immediately. Remember-before exchanging an empty bottle for a new one; make sure all control valves are in the “off” position. This can create a low flow of gas through the griddle. This would require the tank to be disconnected from the regulator, and then reconnected to reset the regulator.

Open the valve (shut-off or ‘ON’ LP tank). Test for leaks by applying liquid soap solution to all joints. Bubbles forming indicate gas leak.

- The following diagram is for informational purposes only. These locations are not the only points to check nor the only potential areas for a gas leak to be present. **Ensure the leak test includes all valves, pipe connections, joints, lines and every point from the gas source to the burners.**

---

11
NEVER USE AN OPEN FLAME TO CHECK FOR LEAKS.

UNPACKING UNIT:

Product Inspection: A final inspection of your product occurs at the factory to ensure a quality product is packaged. Please re-check for possible shipping damage immediately after unpacking your griddle. If the appliance is found to have some damage, contact your dealer immediately as often the shipping carrier will have a timeframe to report damage. Please also save the packaging material the product came with as that is at times inspected by the shipping carrier.

Caution: Do not leave the unit under the sun with the protective film on for a long period of time as it will make the film difficult to remove and/or leave markings on the materials which are not covered by the warranty.

Your Series Appliance comes pre-assembled and requires very little setup. We do however; recommend the use of professional help during the installation of your unit as improper installation may affect your warranty. Remove the unit from the box along with all accessories and check that no damage has occurred to the unit or any parts. Remove all packaging materials, labels and protective plastic film before you start cooking.

Burners: Check the burner tubes and remove any obstructions that may be in the ports or holes. Using cold water and a brush will be sufficient. Make sure all foreign particles are removed from the burner before use. Make sure the air shutter on the burners is slightly opened (to about 1/8" for NG and 1/4" for LP). When finished ensure that the burners are aligned with the valve orifice and seated in the bracket slot. This is accomplished by first placing the burner tube shutter hole securely over the valve orifice and ensuring the male post on the griddle chassis rests in the corresponding slot in the rear of the burner. Failure to do so could result in a fire and injury.
Gas Connections

Natural Gas Requirements

- Connect a suitable natural gas flex connector to the griddle regulator located on the rear right corner of the appliance. It is recommended to use a flex connector with a minimum of a ½” diameter or larger.
- Sealing all non-flared fittings with thread sealant or Teflon tape.
- Ensure the flex connector is protected from sharp edges, heat, aggressive surfaces, and kinking.
- Check the appliance controls to ensure all control valves are in the full OFF position.
- Turn on the main gas supply and check all connections for leaks using soapy water as described in the leak testing procedure section.
- The regulator used must be set for 4” water column and is for use with Natural gas only. Note: Most low pressure regulators have a directional arrow indicating the direction in which the gas must travel. Ensure the arrow is pointing in the direction of the griddle.
- An installer supplied gas shutoff valve must be installed in an accessible place.

Liquid Propane (LP) Gas and Tank Requirements

- If your GRIDDLE is for Liquid Propane application, a L.P regulator set for 11” WC must be used and is for use with L.P. gas only.
- The regulator and hose supplied must be used with a 20 lb. L.P. cylinder.
- A collar to protect the cylinder threads on the customer supplied tank.
- An arrangement for gas vapor withdrawal.
- A safety relief device having direct communication with the vapor space of the cylinder.
- A method of mounting.
- The gas supply must be turned off at the LP Gas supply cylinder and the LP Gas supply cylinder must be disconnected from the regulator when this outdoor cooking gas appliance is not in use.
- Always sit the cylinder in an upright position so that the cylinder valve is at the top. This will ensure proper vapor withdrawal.
- The cylinder should not be stored in a building, garage, or any other enclosed area. It should be stored outdoors in a protected, cool, and dry location out of reach of children.
- Never store any spare or extra gas cylinder(s) around or in the outdoor kitchen containing the GRIDDLE or any other open flame, heat-producing appliance(s) or heat source.
**WARNING**

### Filling and Refilling LP Gas Cylinders:

All purging and refilling of LP gas cylinders must be performed by qualified personnel in the LP gas industry. Never store a spare LP gas cylinder under or near this appliance. Never fill the LP gas cylinder beyond 80 percent full. Failure to follow these instructions may result in explosion, personal injury or death.

- Turn control knobs and cylinder valve to the OFF position. Unscrew valve.
- Remove cylinder and have it filled at your local qualified propane dealer.
- Once filled, carefully connect the valve and make sure it is secure and not leaking.
- With the control knobs in the OFF position, turn on the cylinder valve.

If you smell gas or hear a hiss of gas escaping from the tank, get away from the tank and do not attempt to correct the problem yourself. Call the Fire Department immediately.

If your appliance has no leak at the cylinder, then re-check for loose connections and retest for leaks using the method detailed in the following pages with soapy solution.

Do not subject your LP gas cylinder to excessive heat, and always store the cylinder in an upright position. Never store your LP cylinders indoors.

Make sure that when attaching components, all connections are secured and fully tightened to prevent leakage.

**Always check for leaks before every use.**

If one is not already available, it is recommended that an ON-OFF shutoff valve be installed at the gas supply source, and that the gas supply be turned off when either Natural Gas or LP Gas appliances are not in use.

### Transporting and Storing LP Gas

Transport only one cylinder at a time. Ensure the cylinder is secured in an upright position with the control valve turned off and the dust cap in place. Store cylinders outdoors and out of the reach of children. Do not store cylinders in a building, garage, or any other enclosed area.

### Procedure for LP Gas Cylinder Connection (20 lbs)

1. Turn the “Hand Wheel” on cylinder clockwise until it stops to ensure the Cylinder Valve is fully closed.
2. Turn all of the burner knobs to the OFF position.
3. Connect the 3/8" Flare end of the hose to the 3/8" Flare end of the brass coupling on the unit using a 3/4” open wrench. **Do not apply pipe sealant.** (These are flared fittings). Note: remember the rubber line on the hose and regulator must be protected from sharp edges, hot surfaces, aggressive building materials that could cut, melt, or damage the line. A separate approved gas line might be needed to go between the hose...
and regulator and the griddle to position the rubber line in a safe location.

4. Connect the regulator to the LP cylinder. Only hand-tighten the regulator.

5. Check for leaks using a soapy water solution by spraying on all connections, including all of the valves, fittings, lines etc. (any and all gas connections have the ability leak and therefore it is critical to check for leaks before each use)

6. To disconnect after you have used the appliance, turn the burner knobs to the OFF position.

7. Close the Cylinder Valve by turning the Hand Wheel **counter-clockwise** until it stops.

8. Disconnect the regulator from the LP cylinder after use.
Installing the Appliance in an Island

NOTE: Check with City and Fire department for Local Building Codes. A Permit may be required for outdoor kitchen construction.

You will need a second person to help you avoid damaging the appliance or your appliance island.

Ensure all clearances to combustibles are maintained. See page 22

The island must be made out of non-combustible material. In the event it is combustible, the use of an insulation jacket is REQUIRED.

- Protection from Weather: Keep the appliance protected from adverse weather, including rain and wind. Wind, particularly coming into the rear of the griddle, can affect the exhaust from escaping from the griddle. This can back up the heat behind the control panel potentially creating a gas leak, damage to the product, and injury. A wind block behind the griddle may be necessary.
Outdoor Kitchen Ventilation

WARNING

Failure to adequately vent your outdoor kitchen cavity could result in an explosion or fire.

When building a gas griddle into an outdoor kitchen, it is necessary to provide adequate ventilation for the island cavity underneath. This is necessary for not only proper combustion, but also to prevent a buildup of gas. While the amount of venting required for your island will vary due to the variety of differing local codes, inner framework and design of an outdoor kitchen, the amount of gas products installed and their locations, etc, all built in griddle islands should be ventilated in some way. Your local contractor and/or your local code authority can determine adequate ventilation for each installation. Stainless Steel vent panels are available from your dealer to cover the island venting.

The following information is important to consider when adhering to your local code requirements.

**LP/Propane Gas:** LP gas is heavier than air and will settle to the lowest levels of the outdoor kitchen. It is imperative to provide adequate cross ventilation for the areas where gas can accumulate at these lower levels of the island cavity. Should the Propane cylinder be located in the outdoor kitchen itself, a plenum wall is required to separate the gas source from the other areas of the outdoor kitchen (picture shown in owner’s manual), and bosh the cabinets containing the gas appliances and the gas tank should be ventilated appropriately.

**NG/Natural Gas:** Natural gas is lighter than air and will rise to the highest levels of the outdoor kitchen. It is imperative to provide adequate cross ventilation for the areas where gas can accumulate at these higher levels of the island cavity.

The following diagram shows a variety of examples of venting locations and configurations for an outdoor kitchen. These are not the only possible options for venting but instead simply some examples of the more common configurations found. Notice the middle set of vents being positioned lower on the island cavity for LP gas.
ALL GAS CONNECTION POINTS SHOULD BE TESTED FOR LEAKS AFTER INSTALLATION PRIOR TO FIRST USE OF THE GAS APPLIANCE(S).

Before installing an appliance in any island cut out, make sure that the opening is not bigger than the outside frame of the appliance unit. The appliance should rest on the lip of the frame.

Pay careful attention to the location of the gas line. It should be routed away from sources of heat, aggressive surfaces, and sharp edges and should make as few bends as possible.

Ensure the gas line connection will be accessible when appliance is installed. A safety shutoff valve is required at this gas connection point.
The main burners must be double checked for the correct placement in the griddle before operation. When finished ensure that the burners are aligned with the valve orifice and seated in the bracket slot. This is accomplished by first placing the burner tube shutter hole securely over the valve orifice and ensuring the male post on the rear of the burner rests in the corresponding slot in the griddle chassis. Failure to do so could result in a fire and injury.

If the outdoor kitchen countertop will overhang the face of the island, notching out the two front countertop edges will be necessary to allow the griddle to slide flush against the outer front wall to the outdoor kitchen. Due to differing personal preferences of the size of the notch out, this is recommended to be done at the point of installation so that the consumer can dictate their preference.

Slide the appliance into the cut out and then attach the gas line.

Be very careful not to kink the gas line when lowering the appliance into the cut out.

Keep your fingers away from where the appliance will be supported on counter. Your fingers could become trapped and serious injury could occur.

Check to make sure the appliance is level and is supported around the entire outside edge. If the appliance is not level or is unstable, use non-combustible shims under the outside lip to stabilize it.

Perform the leak test procedure as described earlier in this manual.
BUILDING SPECIFICATIONS

*Ensure your island cavity is adequately vented. Consult your local licensed professional for adequate requirements.
*Ensure your outdoor kitchen is constructed out of non-combustible materials
*If your outdoor kitchen is constructed of combustible materials, an insulated jacket is REQUIRED

CUT OUT DIMENSIONS FOR BUILT-IN APPLIC –GRIDDLE

ALL ISLANDS MUST BE MANUFACTURED FROM “NON-COMBUSTIBLE” MATERIAL.

Minimum clearance to adjacent combustible surface at 12” from sides & 12” from back
Installation Diagram  (5 Gallon LP tank shown)

Installation Method for Low Pressure Gas Source- (Natural Gas Regulator shown)

OUT

IN

Yellow Teflon Pipe Thread Sealant is recommended for use on all pipe thread connections EXCEPT flared threads.

CSA Approved Natural Gas Regulator

Stainless Flexline

Close Nipple

Natural Gas Supply

Shut-off Valve 1/2-1 1/2" NPT

IMPORTANT: Regulator must be on the Barbecue or your warranty is void.
FIRST TIME OPERATION

WARNING

Before lighting the burners inspect the gas supply piping or hose. If there is evidence of cuts, wear, or abrasion, it must be replaced prior to use. Always keep your face and body as far away from the griddle as possible when lighting. Always perform a gas leak test before each use.

- Caution: Never operate the appliance unattended. The surface is extremely hot and someone can touch the hot surface and get seriously burned. All gas appliances should be attended at all times.

Prior to using your appliance, verify that all of the following is correct:

✓ The burner tubes are free of any debris or obstruction.
✓ Installation of the proper gas type and regulator settings.
✓ The proper gas connection is complete.
✓ Check for gas leaks.
✓ Minimum clearances are maintained.
✓ All packaging has been removed.
✓ All parts and components are properly in place.
✓ An installer-supplied manual gas shut-off valve is fully accessible.
✓ Gas hoses are clean and inspected for cuts, wear, abrasion, or leaks. Replace if necessary with a suitable UL, ETL or CSA Listed part with internally threaded connector.

Lighting the Appliance

1. Remove the Protective Stainless cover from the Griddle Plate

2. Use caution when lighting burners by standing as far away from the burners as possible. **Do not put your hands, arms, head or any body parts close to the griddle when lighting.**

3. To ignite burners, push the burner knob in and slowly rotate counter-clockwise to the high position.

4. You will hear a loud click as the electronic lighter produces a spark. Listen for the sound of the gas igniting and look for a flame through the circular openings in the front of the griddle plate. If the burner does not light on the first try, repeat immediately
5. If the burner does not light in 5 seconds, turn the burners off and wait five minutes until the gas clears before attempting to light it again. Repeat the procedure or try the manual lighting procedure below.

6. If the burner does not light after several attempts, immediately close all gas valves and consult an authorized service technician.

7. Upon successful lighting, repeat the process on the other burner.

8. To shut off the burners, rotate the knob and turn to OFF. It is normal to hear a popping sound when the burners are turned off.

9. Close the valve at the gas supply.

**Manually Lighting the Main Burners**

**WARNING:** Do not use standard size matches or cigarette lighters to perform match-lighting procedures. Serious burns can occur and lighters can explode.

1. Remove the Protective Stainless cover from the Griddle Plate

2. If you have just attempted to light the burner, allow five minutes for any accumulated gas to dissipate. Use caution by standing as far away from the burners as possible. **Do not put your hands, arms, head or any body parts close to the griddle when lighting.**

3. Locate the lighting tube on the front of the griddle plate in the grease drain area. The lighting tube is a tube protruding approximately ½” from the wall in the drain area and has a hole to the left and right which are used to confirm ignition of the burners. (you will have this same configuration on both the left and right hand side for each of the two burners).

4. Hold your open flame to the front of the Lighting Tube

5. Push in and turn the control knob to HIGH. Listen for the sound of the gas igniting and look for a flame through the circular openings in the front of the griddle plate.

6. If the burner does not light after five seconds (you will see flame from the two observation openings in the front of the griddle plate), turn the control knobs to the OFF position.

7. Wait five minutes until the gas clears before attempting to light it again.

8. If the burner does not light after several attempts, immediately close all gas valves and consult an authorized service technician.
“FLASHBACK” may occur in or around the burner tubes. Flashback exhibits a characteristic “whooshing” sound. If this should occur, immediately turn off your burners, then remove and clean them with soap, water and a brush until all foreign objects are removed.

Before cooking with your appliance for the first time, burn off any foreign matter and rid the unit of any odors by burning the main burners only on HIGH for about 10 minutes. When lit, the flame should have a mostly blue color to it. It may have a tint of yellow and adjustment to the air shutters can be made to obtain a blue flame and proper gas glow (see flame adjustment). This appliance should be preheated before cooking with the main burner control settings on HIGH for five minutes.

Flame Adjustment

a. Become familiar with the safety instructions at the front of this manual. Do not smoke while lighting the appliance or checking the gas supply connections.

b. Make sure that all gas connections are securely tightened and have been leak-tested with a soapy water solution - never with a flame!

c. With the griddle plate removed, light the main burners and run them on the high setting.

d. Inspect burners for proper flame appearance. The ideal flame appearance is one that is mostly blue and not lifting off of the burner surface. There is an air shutter found at the end of the burner (close to the valve) which can be either opened or closed to make adjustments to the flame’s appearance. To adjust, remove the burner from the appliance and loosen the phillips head screw holding the air shutter to the burner. If the flame is yellow, open the air shutter to make the flame bluer. If the flame is lifting off of the burner surface, slightly close the air shutter. Re-tighten the phillips head screw and re-install the burner to recheck the flame appearance. Repeat if necessary.

e. Turn burners to low flame setting and test for proper flame height. Flame should stand between ¼” – ½” on LOW. (To adjust the LOW flame setting simply light the appliance on the LOW setting and adjust the screw located under the knob on the front of the valve using a flat head screwdriver as seen in the diagram below.)
Cleaning Your Appliance

Caution: *Always allow the GRIDDLE to cool before cleaning.*

**NOTE:** You should clean your appliance after each use to maintain the overall appearance over the life of your appliance. After the first use, it is normal for your appliance to become discolored in certain areas from the heat produced by the burners.

**Exterior Cleaning**
When cleaning your appliance, always scrub and polish in the direction of the stainless steel grain. Wipe down the exterior of the appliance to remove any splatter or grease. Do not use harsh abrasives. Use a stainless steel cleaner to clean the exterior surface for a polished look. To remove baked-on foods, use a fine to medium grit non-metallic abrasive pad with a stainless steel cleaner to avoid specks of grease collecting in the grain causing the appearance of rust.

**Griddle Plate Cleaning**
- After every use and when cool, you can thoroughly wipe the plate with the grain using a rough cloth to remove food particles and other cooking residue.
- You may use a mixed solution of water and vinegar (2 tablespoons of water per half gallon) and a scotch brite pad (working in the same direction as the stainless steel grain) to remove the cooked-in food. Special griddle cleaners may also be commercially available in your area which may be used to remove heavy soil build-up.
- Thoroughly rinse the griddle with room temperature water after using any of these cleaners.
  **Caution:** Never flood a hot griddle with cold water! This causes griddle warping and can cause the griddle plate to crack.
  - Dry the griddle plate and coat it lightly with the cooking oil of choice or apply a non-stick cooking spray. This will prevent the griddle from getting surface rust.

**Drip Tray**
Clean the drip tray after each use. Failure to do so could result in a fire. Once the appliance has cooled completely, remove the tray by pulling it all the way out until it comes free. Clean the tray with hot soapy water and re-install. If using an oven cleaning agent, be sure to carefully follow the manufacturer's instructions to avoid damage to the stainless steel. Make sure the drip tray is fully inserted back into the griddle.
**Flue Cover Assembly**

The Flue Cover Assembly is located at the back of the griddle plate assembly. Wipe the flue cover clean with a cloth. You may also remove it for cleaning with a hot soapy solution. Make sure the flue cover is fully inserted back into the GRIDDLE again. Ensure this area remains un-obstructed at all times.

**Stainless Steel Burners**

The appliance must be completely cooled before proceeding. Make sure the gas supply is off and all control knobs are in the “OFF” position. You must remove the griddle plate to expose the main burners in the appliance. On the bottom rear of each burner is a cotter pin. Remove cotter pin. To remove burner, pull upwards and slide burner toward the rear of the appliance. Repeat for each burner. To clean the burners, use a wire brush to clean the exterior of the burner. Free all clogged ports of obstructions with a small metal object. Clean out any debris through the air shutter and inspect the burner inlet to ensure it is free of any obstructions. Use a rod or pipe cleaner to remove any debris within the burner if necessary.

**Spider and Insect Warning**

Spiders and other insects can nest in the burners and orifices of this and any other outdoor products, which causes the gas to flow from the front of the burner and have a “Flash Back”. This can create a dangerous condition that can cause a fire behind the control panel, damaging the GRIDDLE and making it unsafe to operate. Inspect the burners and orifices once a year, or if the GRIDDLE has not been used for more than a month or if any of the following conditions occur:

1. The smell of gas and with the burner flames appearing yellow.
2. The griddle does not reach temperature.
3. The griddle heats unevenly.
4. The burner makes popping noise.

**WARNING**

**NOTE:** Make sure each burner is properly placed after cleaning. It is very important to ensure the end of the burner is installed appropriately onto the gas valve to ensure gas flows safely into the burner. Failure to meet these conditions can be dangerous causing personal injury and/or property damage.
Warranty Registration

If you have purchased a griddle you must register your product within 30 days of purchase to validate the warranty and maintain your original receipt to get parts for the appliance. You may register your appliance at grills.com by selecting Contact Us, and then selecting Register your Product. You may also fill out page 3 and mail to the address located at the bottom of the form. The warranty is for original owners only and cannot be transferred to new owners. You must retain your sales slip or invoice.

Installation, repair and maintenance work should be performed by an authorized service technician. Work by unqualified persons could be dangerous and will void the warranty. All Natural and LP Gas appliances must have a qualified installer complete the installation for the warranty to be in effect. The incorrect installation of the gas appliance will void the warranty. Please call Outdoor Products for more information on correct installation of the gas appliance.

Outdoor Products shall not be liable under this or any implied warranty for incidental or consequential damages and Outdoor Products liability is limited to the purchase price of the appliance only. This warranty gives you specific legal rights, and you may also have other rights, which may vary from state to state. This warranty is applicable in the United States and Canada only. No one else is authorized to perform any obligations under this warranty.

High cooking temperatures, excessive humidity, chlorine, fertilizers, lawn pesticides and salt can affect the Stainless Steel components and for these reasons, the limited warranties DO NOT COVER DISCOLORATION OR RUST, unless there is a loss of structural integrity on the appliance components.

WARRANTY ON PARTS:

- Main Burners - Lifetime
- Griddle Plate – Lifetime
- Exterior Construction - Lifetime
- Valves - 15 years
- All other parts - 1 year

Consumers are responsible for all labor and shipping cost associated with warranty parts. Please make sure to have your sales receipt information and product serial number located outside the appliance on the left side panel.

All replacement parts can be purchased through your local stocking dealer.
